

MST. MANSURA ANAN MITA

FULL STACK WEB & MOBILE APPLICATION DEVELOPER

Portfolio Information Document

A consolidated reference document containing personal information, education, technical skills, project summaries, achievements, and portfolio preferences. Project descriptions are based on the supplied CV and the publicly visible GitHub repository information.

Email	mansuraananmita@gmail.com
Location	Bogura, Bangladesh
GitHub	github.com/mansuraananmita-wq
Facebook	Facebook profile

Portfolio reference: Anil Peter Portfolio

Preferred presentation: dark/light theme toggle, modern clean typography, smooth scroll/hover/entrance animations, and relevant sections such as Hero, About, Skills, Projects, Education, Experience, Achievements, and Contact.

1. Personal Profile

I am a Full Stack Developer and an Educational Technology and Engineering student at the University of Frontier Technology, Bangladesh. My interests include full-stack web development, mobile application development, and educational technology. I work with a range of programming languages, frameworks, and development tools to build practical digital applications. I also take part in technology competitions, collaborative projects, and problem-solving activities to strengthen my software development skills.

Education

Qualification	Institution	Year / Result
B.Sc. in Educational Technology and Engineering	University of Frontier Technology, Bangladesh	2024–Present
Higher Secondary Certificate (HSC)	Govt. Shah Sultan College, Bogura	2023 · GPA 5.00/5.00
Secondary School Certificate (SSC)	Police Lines School and College, Bogura	2021 · GPA 5.00/5.00

Academic details

- Department: Educational Technology and Engineering
- Session: 2024–25
- Student ID: 2402032

Areas of Interest

- Full-stack web development
- Mobile application development
- Educational technology
- Problem-solving and data structures & algorithms

2. Projects

The project list below follows the requested GitHub selection: include the public repositories except website_12_April_2026 and eme; retain eme3. Video demonstrations may be added later. No live-demo links have been provided yet.

Pothik — Ride-Hailing Platform (Bangladesh)

2026 · A ride-hailing platform with a Flutter passenger application, NestJS backend, and React admin console.

Technology stack: NestJS, Flutter, React (Vite), Prisma, PostgreSQL, Redis, Docker, OpenStreetMap

- Organized as a monorepo with backend services, passenger mobile app, and admin console.
- Backend repository documentation describes database migrations, seeded data, ride-related backend workflows, and nearby-driver spatial query examples.
- The passenger app uses OpenStreetMap through flutter_map and Nominatim; the admin console supports management workflows.
- The CV also identifies ride lifecycle and SOS flows as part of the platform.

Repository: https://github.com/mansuraananmita-wq/Pothik

Finity — Online Fish Store

2026 · A bilingual e-commerce storefront for browsing and purchasing fish products.

Technology stack: Laravel 10, PHP, Blade, Vite, Tailwind CSS, Alpine.js, MySQL/MariaDB, Fortify, Sanctum

- Product catalog with categories, detail pages, and ratings.
- Shopping cart, wishlist, coupon discounts, shipping-zone calculation, and order history.
- Checkout integrates bKash and Nagad payment options; repository notes support sandbox/live configuration through environment settings.
- Customer authentication includes registration, login, email verification, and password reset.
- Admin panel for products, categories, coupons, shipping zones, orders, reviews, and customers.
- Interface supports English and Bangla.

Repository: https://github.com/mansuraananmita-wq/finity

FinanceTracker Pro — Personal Finance Management

2026 · A university OOP capstone project combining a Java Swing desktop client with a Laravel REST API and web UI.

Technology stack: Java Swing, Laravel 10 REST API, MySQL 8.x, SQLite for local development, Maven

- Tracks income and expenses and supports budget management.
- Provides analytics, calendar/notification endpoints, and PDF report generation as described in the project documentation.
- Uses a REST API with authentication endpoints and protected user operations.
- Includes user/admin roles and a web interface alongside the desktop client.

Repository: https://github.com/mansuraananmita-wq/FinanceTrackerpro

---

2. Projects (continued)

Safely — Campus Problem Reporting & Student Safety Platform

Project: Safely is a campus support platform for students, teachers, staff, and university operations teams. Users can submit campus issues, attach evidence, and follow case progress. Sensitive reports are restricted to authorized teams.

Technology stack: React 19, TypeScript, Vite, Tailwind CSS, React Router, Flutter, Supabase PostgreSQL, Supabase Auth, Row-Level Security (RLS), Supabase Edge Functions, Leaflet, OpenStreetMap.

Key Features

- Campus issue reports with category, location, photos, optional location pin, voice notes, and short videos.
- Confidential/anonymous reporting options and role-based access controls for sensitive cases.
- Report status tracking through review, assignment, work, resolution, and closure.
- SOS flow with countdown and GPS location for the campus desk; offline fallback can offer a prefilled SMS or call to 999.
- Safe Walk timer with arrival check and optional location sharing.
- Campus support contacts, alerts, lost-and-found information, and English/Bangla language support.
- Operations dashboard for assigning reports, managing queues, updating statuses, alerts, and audit records.
- Public status page with aggregated issue statistics that excludes sensitive/confidential reports.

Privacy & Safety

Repository documentation describes role-based access for students, teachers, staff, departments, security, and administrators; database access policies for SOS records; rate limiting; and audit logging. Anonymous identity is separated from ordinary report records, and revealing identity in qualifying sensitive cases requires a second authorized reviewer.

Portfolio Summary

Safely demonstrates a multi-role web and mobile application that combines campus issue reporting, location-aware SOS handling, privacy-conscious reporting, and role-based backend access. SMS delivery through Twilio depends on configuring the required project secrets; external-service behavior should not be described as guaranteed until configured.

Repository: github.com/mansuraananmita-wq/safely

2. Projects (continued)

Scholario — Collaborative Campus Learning Platform

2026 · A campus-oriented social and learning platform for student profiles, peer communication, and collaborative study.

Technology stack: React 19, TypeScript, Vite, Tailwind CSS, Zustand, Express, Google GenAI, Jitsi Meet

- Student authentication and profiles, including academic information, skills, and projects.
- Social feed with post creation, likes, comments, sharing, and reporting.
- Peer messaging, follow/unfollow connections, and skill endorsements.
- Courses, syllabus progress, reading challenges, study groups, discussion channels, and a resource library.
- AI Learning Coach can provide study plans; repository notes a simulated fallback when an API key is unavailable.
- Live Study Room uses a Jitsi Meet embed, with opportunities board, leaderboard, analytics, settings, and global search.

Repository: https://github.com/mansuraananmita-wq/scholario

---

eme3 — Multi-vendor Marketplace

Repository profile · A multi-vendor marketplace concept featuring short-form product reels, live shopping, and checkout.

Technology stack: JavaScript, Supabase (database/auth/storage structure documented in repository)

- Repository overview describes a marketplace for multiple vendors with reels, live shopping, and checkout.
- Repository documentation describes customer, approved-vendor, and admin permissions.
- Documented data areas include vendor profiles, product catalog and images, reviews, cart, wishlist, orders, disputes, payouts, reels, live streams, and messages.
- The repository documents row-level security policies and role-specific data access rules.
- Detailed feature descriptions here are limited to information visible in the public repository documentation.

Repository: https://github.com/mansuraananmita-wq/eme3

Programming Practice — Problem Solving

Ongoing · Regular practice of algorithmic problems and foundational computer science topics.

Technology stack: C, Python, Data Structures and Algorithms

- Ongoing programming practice in C and Python.
- Focus area listed in the supplied CV; no separate public repository link was identified in the supplied project details.

Repository: https://github.com/mansuraananmita-wq?tab=repositories

---

Repository selection note

Included project repositories: Pothik, Finity, FinanceTrackerpro, Scholario, and eme3. Excluded as requested: website_12_April_2026 and eme. The public GitHub profile displayed seven repositories when reviewed; the five included repositories above are the repositories remaining after applying those two exclusions.

3. Technical Skills

Programming Languages

Dart · TypeScript · JavaScript · PHP · Java · C · C++ · Python · HTML · CSS

Frameworks & Libraries

Flutter · NestJS · Laravel · React (Vite) · Express · Prisma · Java Swing · Tailwind CSS · Alpine.js · Zustand

Tools, Platforms & Databases

Visual Studio Code (VS Code) · Cursor · Antigravity · Git · GitHub · Docker · MySQL · PostgreSQL · Vite · Canva

Focus Areas

- Mobile application development
- Full-stack web development
- Educational technology
- Data structures and algorithms
- Problem-solving

Note: The skills above are taken from the supplied CV and the tools separately provided by the user. Specific proficiency levels were not supplied, so none have been assigned.

4. Achievements & Activities

Hult Prize On-Campus Competition — 5th Place

Date: 28 February 2026 · Organizer: Hult Prize at University of Frontier Technology, Bangladesh

Participated as a member of Team BabunToo Academy. The team placed 5th among 20 participating teams, with a score of 164 out of 210. Advisor: Md. Ashrafuzzaman.

Jagannath University AI & IT Fest 2026 — BrainChild Season 2.0

Date: 30 August 2026 · Organizer: Jagannath University IT Society (JnUITS)

Selected as a Grand Finalist among the top 15 teams with Team Beta and presented Folika. Folika is described in the supplied activity record as an AI-powered, Bangla-first agricultural advisory platform covering crops, fisheries, and livestock for rural Bangladesh. Advisor: Md. Ashrafuzzaman.

BRAC Youth Ambassador — Certificate of Completion

Participated in a BRAC Migration Programme initiative in partnership with the Australian Government, focused on mass campaigning to combat human trafficking and people smuggling.

5. Certifications & Courses

- Introduction to Programming
- Data Structures (Basic)
- Computer Skills (MS Word & PowerPoint)
- Presentation Skills
- Basic Video Editing

6. Professional Skills

Communication · Teamwork & Collaboration · Problem Solving · Time Management · Adaptability · Critical Thinking · Leadership

7. Languages

Bengali — Native · English — Fluent · Hindi — Basic

8. Interests

Learning New Technologies · Mobile & Web App Building · Content Creation (Video/Media) · Reading

9. Portfolio Preferences & Pending Items

Item	Preference / Status
Reference website	anilpeter.vercel.app
Theme	Dark and light mode toggle
Typography	Modern and clean
Animations	Smooth scroll, hover, and entrance animations
Sections	Hero, About, Skills, Projects, Education, Experience, Achievements, Contact, and other relevant sections
Profile photo	Provided; use the supplied photo
Live demos	No live-demo links provided yet
Video demonstrations	Will be provided later

Important notes

- Project video links will be added later; no video links have been invented or included.
- No live demo URLs have been provided, so the document lists repository links instead.
- The project descriptions are based on the supplied CV and public GitHub repository documentation. They describe documented functionality, not a claim that every feature has been independently tested.
- The document intentionally omits reference-person contact details from the CV because they are not necessary for a portfolio information file.
